

PRESS RELEASE

Bangalore based Yos Technologies to tap Tier II & Tier III cities in Karnataka

*Announces tie-ups with hospitals in Bellary, Hassan & Tumkur for its
Hospital Management Solutions & Services*

Mumbai, 26th July, 2010: Bangalore based Yos Technologies Pvt Ltd (Yos), a Healthcare Software Products and Solutions company, has announced its plans to tap Tier II & Tier III cities in Karnataka for its unique Hospital Management Solutions & Services that substantially improves operational efficiencies and quality of healthcare in hospitals.

The company has already tied up with Mangala Hospital at Hassan, Adarsha Hospital at Tumkur, and a Tier 1 Government Hospital at Bellary to provide its Hospital Management Solutions & Services. Further, Yos is also looking at tying up with hospitals in other Tier II & Tier III cities in Karnataka like Mysore, Mangalore, Udupi, Hubli, Shimoga and Belgaum.

Said Vijaya Verma, Founder & CEO of Yos Technologies, “Hospitals, especially in Tier II & Tier III cities have been facing challenges in adoption of Information Technology, because most solutions offered to them so far needed large upfront investments as well as major changes in their overall processes and retraining of their staff. Yos is addressing this need with its solutions that are simple to deploy and use. Our solutions help the hospital improve operational efficiencies, while giving hospitals an opportunity to generate revenues as well. It also benefits the end user – the patient – who now has access to Smart cards and the associated benefits that were only available in bigger Tier I cities till now.”

“We have already tied up with more than 30 hospitals in Bangalore and now we are looking at expanding to other Tier II & Tier III cities in Karnataka where we see huge potential for our hospital management solutions & services” **added Vijaya Verma.**

Yos had recently announced the release of the latest version of its flagship product ‘Yos Record Management System (Yos RMS)’ – a unique Smart Card based solution for managing Hospital Inpatient and Outpatient records.

‘Yos RMS’ allows all the hospital records to be maintained online for better space utilization, enables exchange of data across various locations of the hospital network safely and efficiently and also helps in clinical analysis of data for planning as well as for research. Its light weight architecture and document oriented database keeps resource requirements to minimum while being extremely scalable.

The Record Management System developed by Yos is a pay-as-you-grow solution that is tuned to the existing processes of the hospitals, while being flexible enough to cater to future changes. It can be offered as hosted or standalone implementations to suit the level of capital expenditures of hospitals.
